

Syxyl achieves a 1.1% open rate for its ProBio-Cult® Immune product with tips for strengthening the body's defenses

ABOUT PROBIO-CULT® IMMUN

Food supplement with selenium for normal functioning of the immune system, vitamin A for the intestinal mucosa and for normal functioning of the immune system and Lactobacillus rhamnosus GG cultures.

"CONATIVE is ideal for attracting interested readers to our products with our editorial content. The very high dwell time and click-through rate of readers are a clear sign for us that we can reach exactly the right target group through this channel and get them excited about our product."

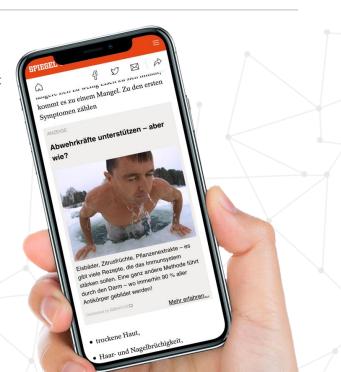

Anne Flender | Media & Digital Manager | Syxyl GmbH & Co. KG

MISSION

Reaching health enthusiasts with editorial content and positioning the product ProBio-Cult® Immune as the ideal support for the immune system in this target group.

SOLUTION

Addressing health enthusiasts in the CONATIVE network with native teasers. The advertising medium expands per click and presents the Syxyl product Probio-Cult® Immun in an advertorial with images and editorial text.

RESULT

With the help of CONATIVE, Syxyl achieves a very good open rate of 1.12 % for its advertising materials. The average dwell time of 45 seconds and further click rate of around 19 % clearly show the high interest of the readers gained in the topic and product.

FROM CONTENT TO PRODUCT

With editorial content on strengthening the immune system in the form of native teasers, Syxyl initially picks up health-savvy people in the CONATIVE network. Interested users can then click to read the entire article directly on the publisher page. To do this, the advertising medium expands and shows the complete editorial article on the topic, visually enhanced with appropriate images. At the end of the article, the ProBio-Cult® Immune product is presented and linked externally to further information.

CONATIVE FACTS

CONATIVE is an expanding "in-read" advertising format that places a wide variety of media content in the user's reading flow.

With the Al-supported optimization technology Momentum, multivariate creative optimizations, algorithms and neural networks were used to achieve maximum campaign performance.
